

# MediFlex PFP

## HEADER POUCHES

### User-Friendly pouches with a flap

Our **MediFlex PFP** header pouches are equipped with an opening header of breathable valves made of Tyvek®. Enabling safe and user-friendly packaging, they are particularly suitable for voluminous products.

These header pouches boast all the advantages of **MediFlex PFP** material, such as high strength, far lower sensitivity to moisture than paper, and excellent permeability to gas and air.

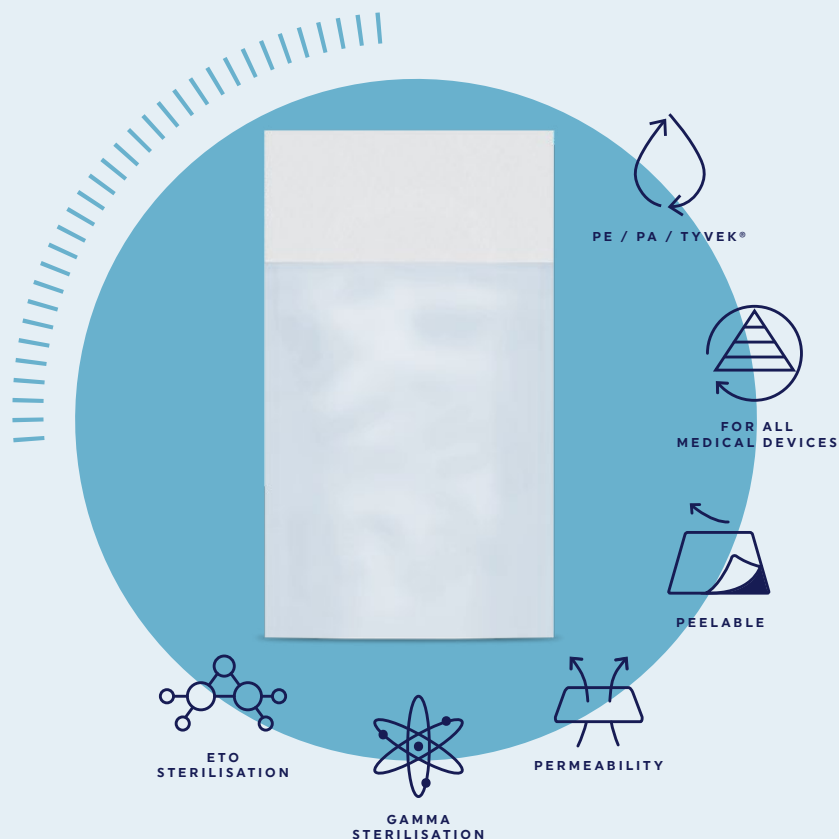

### PROPERTIES

- Extremely high puncture resistance
- High permeability to gas and air thanks to (breathable) valves made of Tyvek®, enabling fast and safe sterilisation and ventilation
- User-friendly peel system on the header and overlap at the filling aperture ensure easy opening and filling of the pouch
- Far less sensitive to moisture than paper: impermeable to bacteria even in moist environments
- Impermeability to bacteria enables long-term storage of sterile products
- Sterile extraction thanks to entirely fibre-free and splinter-free peel effect
- High seal strength for packaging of voluminous products
- Fast identification of contents

**MediFlex PFP** header pouches comply with the standards DIN 58953, DIN EN 868 and DIN EN ISO 11607.

# WE PROTECT WHAT MATTERS MOST

## SUITABLE FOR STERILISATION BY

- Ethylene oxide
- Irradiation

## RANGE

### MediFlex PFP HEADER POUCHES

- Made of various composite films (e.g. coextruded PE film or a combination of PE/PA/PE) with a peelable header made of Tyvek®
- Front side made of composite film, divided rear side featuring composite film and header made of Tyvek®
- Very well suited to voluminous products
- With or without gas indicator
